

OXO-BIODEGRADABLE

merchandise bags *...it's all about green*

Among the billions of bags used by consumers every year, some will inadvertently be lost in nature and become eyesores in parks and roadside for months or even years to come.

To address this concern and provide our clients with a more environmentally friendly solution, American Ad Bag offers Oxo-Biodegradable plastic merchandise bags. These bags, left in an open environment or lost in nature, will degrade and ultimately biodegrade cleanly over time. The sun's ultra-violet rays will trigger a degradation process that will see these bags breakdown cleanly and disappear.

Oxo-Biodegradable bags look, feel and perform just like regular plastic bags. They have a shelf life of 24 months (in closed boxes not exposed to intense heat or direct sunlight) and will serve the end user well. Once discarded and exposed to oxygen and the outdoor elements for an extended period of time, they will degrade and disappear over a 12-18 month period. Once degraded, active micro-organisms found in the soil will consume all particles over time and leave biomass, water and carbon dioxide, all of which are part of the normal bio-cycle.

By embracing Oxo-Biodegradable bags instead of traditional plastic bags, you help reduce the accumulation of plastics in nature and allow for a cleaner and safer environment.

If you would like to know more about our Oxo-Biodegradable technology or know how American Ad Bag can help you reduce your environmental footprint, we invite you to give us a call today.
